## ST. REGIS EVERBEARING Red Raspberries

RASPBERRIES FOR FOUR MONTHS! That's what you get when you plant St. Regis—the new everbearing variety. Moreover they are not only raspberries, but raspberries of the very highest grade.

ST. REGIS is of pure American blood and of ironclad hardihood, the canes enduring the severest cold uninjured and are wonderfully prolific. Unlike Belle de Fountenay, Henrietta, Marvel of Four Seasons and all other so-styled everbearing red raspberries that have preceded it, (and many others that are not everbearing), its foliage never suffers by sunburn or scald, nor is its growth of cane impared by the heat or drought of summer.

In addition to the bright crimson color and large size of the fruit, it is so firm and rich in sugar that it will stand shipping two hundred miles, arriving at market in first class order; and it can readily be kept in perfect condition for several days after being gathered.

The merits of this truly reliable, everbearing raspberry may be summarized as follows:

1. It is the earliest of all red raspberries.

Price:

- 2. It is wonderfully prolific; the first, or main crop, being far greater than that of any other red variety known.
- 3. It gives a crop of fruit all summer and autumn, fruiting on the old canes in generous quantities until late in August. By this date, berries begin to ripen upon the young, i. e., current year's canes, which continue to produce berries in increasing numbers until late autumn; in fact, until severe frost.
- 4. Berries are bright crimson, of large size and of surpassing quality—rich, sugary, with full raspberry flavor. They are of exceedingly meaty, firm texture and keep in good condition longer, after being gathered, than any other red raspberry. As a shipper it is unexcelled.
  - 5. The canes are of stocky, strong growth with a great abundance of dark green leathery leaves.
- 6. It succeeds upon all soils, whether light and sandy or cold heavy clay, and the canes are absolutely hardy.

All raspberry plants must be set out in fall when dormant or early in spring, never later than first week in May to insure success. Strawberry plants can be set out later.

Both our raspberry and strawberry plants are thoroughly acclimated and will thrive in the coldest zones. The St. Regis needs no winter protection.

15 for \$1.00; 25 for \$1.50; 50 for \$2.50; 100 for \$4.00; 500 for \$15.00.
